Dixon's American Graphite Pencils, FOR OFFICE, DRAWING AND SPECIAL USES,

A New Lead Pencil

Of the finest quality, and all grades, from the softest up.

The peculiarity of these pencils consists in their being uniform and reliable, soft, smooth, very black, holding the point in wear; the mark clear and perfect, but easily removed by the rubber: the lead tenacious, the wood old and soft, the finish perfect; pleasant to use, they are wholly American, and no discriminating person will be without them after a trial.

Explanation of grade stamps (copyrighted) on Dixon's Graphite Polygrade Pencils:

S. "Soft".—For beavy work on soft paper; or for directing parcels; too soft for the pocket or general mee. S. M. "Soft Medium."—For general commercial or pocket use; very smooth. M. "Medium."—For the accountant's desk, reporters, banks, and all uses where a smooth, black pencil is wanted that will last well in fine work. H. "Hard." For architects, civil engineers, draughtsmen, &c.; a very fine, clean line. V. H. "Very hard."—For the finest lines. All these grades yield eastly under the rubber. It must be remembered that different hands require different grades of pencils, the same as they require different pens. The "S. M." will suit some parties for the uses set down for the "M." and the "M." suit many hands for general use. We find that even Stenographers differ, some requiring a softer pencil than others. The "M." was specially designed for them, and suits the majority, as it does the majority of Accountants in Banks and Offices, but the "S. M." is popular for general use.
